Field of the Invention The present invention relates to a hybrid vehicle having a first motor/generator and a second motor/generator which are disposed in series and connected to each other. 2. Description of the Related Art An example of a hybrid vehicle having a first motor/generator and a second motor/generator which are disposed in series and connected to each other is disclosed in Japanese Patent Application Laid-Open No. 2004-189594. In the hybrid vehicle described in Japanese Patent Application Laid-Open No. 2004-189594, power is supplied from the first motor/generator to a vehicle drive shaft via a planetary gear mechanism. Power is supplied from the second motor/generator to the vehicle drive shaft via a clutch. The first motor/generator and the second motor/generator have the same vehicle drive system, and the first motor/generator and the second motor/generator are driven independently of each other. That is, the output of the first motor/generator and the output of the second motor/generator are not synchronized with each other. However, in the hybrid vehicle described in Japanese Patent Application Laid-Open No. 2004-189594, while the rotation of the first motor/generator can be synchronized with the rotation of the second motor/generator, the rotation of the second motor/generator cannot be synchronized with the rotation of the first motor/generator. Therefore, there is a possibility that the output torque characteristics (torque/current characteristics) of the first motor/generator and the second motor a1d647c40b

What's New In AutoCAD?

Incorporate change suggestions from work in progress and other drawings into your own designs. Now you can easily draw the best part of a design or compare a prior design with current changes. Rapidly import changes in the Cadence® Cloud and Cadence Inkscape into your design. Just drag the changes to the CAD drawing, and AutoCAD takes care of the rest. It's simple to add a blank line or comment to a drawing so you can later identify the exact area you are working on. Both cadence.com and cadence.io make it simple to collaborate and share work. For example, you can securely share a DWG or FBX file with your colleagues or design partners. You can even send comments or changes directly from the Inkscape and Cadence Cloud apps to the DWG file. PDF Import: Import PDF-based files to create a new DWG file that you can then edit. Add annotations to the imported PDF file so you can work directly with it and the drawing file. Cross-reference: Set up your own cross-reference system to easily reference parts and assemblies. The Visual Layers tool now works with linked DWG files. The first two links in a linked drawing are automatically converted to linked DWG files. This means you can use the Visual Layers tool to cross-reference files in the same folder, the same CAD document, and even two different CAD documents. Supply Management: Automatically scan drawings and you can add to your inventory. (video: 1:20 min.) The Supply Management tool automatically registers and assigns quantities, helping you to track costs and revenues. Inventory items can be grouped in detail and list views. The Cadence Inkscape app now includes a scanner. You can scan either CAD or DWG drawings with just a click. (video: 2:45 min.) Inventor CAD: The Cadence Inventor CAD tool works on a laptop or tablet. No apps are required, and you can download CAD documents from the Inventor.com web page. For a more powerful CAD tool, you can connect to your computer and to Cadence Inkscape. You can use CAD sketching tools to create quick rough layouts, then create precise CAD layouts to edit.
