Basic use of AutoCAD involves creating 2D drawing designs. The second most widely used type of software in this field is the free CAD software. There is no difference between CAD and design software. What Are the Types of AutoCAD? There are three types of AutoCAD: Home, Classroom, and Enterprise. Home This is the most straightforward and least expensive way to use AutoCAD. With Home, you can create documents in the AutoCAD application and store those documents on your computer. You can print your designs, export them to other applications, and most importantly, you can share your designs with others. Classroom Classroom allows you to start with a 30-day trial period to determine if AutoCAD is a good fit for you. You can take an AutoCAD Classroom course from an Autodesk Certified Instructor or you can purchase a class from an accredited online or offline school. You can buy AutoCAD Classroom access for an unlimited time from Autodesk.com. Enterprise Enterprise allows you to create documents on AutoCAD Server. The server generates a digital version of the drawing you created and shares that drawing with others. The AutoCAD Server, which is generally available on a client/server system, is a software tool that provides users with an environment for the creation, storage, and distribution of electronic models. The Autodesk AutoCAD Server Product Guide provides additional information and installation instructions. There are two versions of AutoCAD Enterprise: Classic and Graphics Suite. Classic Classic is similar to Classroom with the added feature of the ability to create and open templates. Graphics Suite Graphics Suite is much like Classroom with the added feature of generating in-memory rendering. Note: You can only use Classic or Graphics Suite on a computer with AutoCAD installed. You may also use Classroom, Classic, and Graphics Suite by installing AutoCAD on a mobile device. You can do this on Windows 10, 8, 7, Vista, XP, Mac, and Android. These are the types of CAD software: CAD software is used to create drawings on computers. CAD stands for computer-aided design. Each frame can include a number of blocks, which in turn may contain a number of pixels for each block. Each pixel may include a number of color components or color planes, such as, for example, red, green, and blue (RGB) planes. Many of the frames in a digital video stream may be intra-coded or inter-coded. Intra-coding refers to coding a frame with reference to other frames in the digital video stream.
