Q: javascript selenium webdriver how to check if element exists? I'm a little confused about using the Exist() method in javascript. I have this code : if (driver.FindElement(By.Id("btn-add-more-items")).Exists()) { driver.FindElement(By.Id("btn-add-more-items")).Click(); } Now this way : var elements = driver.FindElements(By.ClassName("btn-add-more-items")); if (elements.Count > 0) { driver.FindElement(By.Id("btn-add-more-items")).Click(); } will check if the button exists before clicking it or not? A: No, it won't. If you want to know whether a specific element exists, use the Exists method. If you want to know whether there are multiple elements, use the Count method.
