Rajpal Yadav (Naseeruddin Shah): A simple man who lives in a small town in Uttar Pradesh.. The film debuted at the 64th International Film Festival.The present invention relates to a refrigeration system. More specifically, the present invention relates to a refrigeration system having a power source that is automatically disconnected when the output of the power source drops below a predetermined value. Refrigeration systems are used to remove heat from a desired volume of conditioned space. Refrigeration systems typically contain a compressor, a condenser, an expansion device and an evaporator. The compressor compresses a low-pressure gas, such as freon, to a high-pressure gas. The compressed gas is then passed to the condenser. The condenser causes the compressed gas to condense into a liquid. The liquid is then cooled in a separate cooling water or air loop by the heat exchange with the desired volume of conditioned space. The liquid is then expanded to a lower pressure in the expansion device. The expansion device is typically a thermostatic expansion valve which, when exposed to the liquid coolant, reduces the pressure of the liquid and maintains a substantially constant temperature within the desired volume of conditioned space. The low-pressure liquid is then passed through the evaporator, which exchanges heat with the low-pressure liquid. The low-pressure liquid is then returned to the compressor to complete the cycle. Many prior art refrigeration systems are controlled by use of a thermostatic valve which connects the cooling water loop to the condensing coil in response to a drop in the temperature of the cooling water. In these systems, the temperature of the cooling water is monitored and if the temperature drops below a predetermined limit, the compressor is energized. The presence of the compressor and the compressor motor are required to regulate the cooling water temperature and maintain the desired temperature within the conditioned space. By controlling the temperature of the cooling water, the temperature of the conditioned space is maintained. If, due to a defect in the refrigeration
