High-resolution wedding pictures are becoming more and more popular, but they require a large amount of storage space and can take many hours to download and transfer. Fortunately with the help of a few tricks, it’s never been easier to put together high-resolution images for your wedding albums. At these days, the common target resolution in high-end wedding photography is 4000x (4000 pixels per inch) or 4500x (4500 pixels per inch) for both photos and video. Sometimes, as with high-dynamic-range (HDR) images, it could also reach 10000x quality. Due to this high resolution, we always recommend you to use a RAW file format over a JPEG file format and convert RAW to TIFF files before to be resized or shared.
